RAFAEL MATOS MONTEIRO INFANTE

Senior Full-Stack Java Engineer · Payments & Fintech · Platform Engineering · Legacy Modernisation

São Paulo, Brazil · Remote (UTC−3) — near-full workday overlap with US Eastern · 4–5h with UK/EU
matos.rafael@gmail.com · +55 19 99962-1642 · linkedin.com/in/infanterafael · github.com/rafaelinfante · rafaelinfante.net

PROFESSIONAL SUMMARY

Senior full-stack Java engineer with 20+ years of experience, specialized in **payments and fintech**. Raised card-payment authorization from **~38% to ~85%** by building two payment gateways from scratch (Stripe, Fiserv/Authipay) and migrating merchant traffic onto them. Core engineer since inception on **PayBrix**, an insurance-collections platform publicly reporting **€150M+ collected**. **Zero confirmed double-charges** across 300k+ transactions; **99.997% webhook delivery**. Largest contributor to the **Port of Dakar's truck-access platform** — **3.7M truck movements, 24/7, over six years**. Built the team's CI/CD from zero — 26 pipelines, deploys under a minute. AWS Certified Developer – Associate (2026). Oracle Certified Professional, Java. **Fluent English (C1)**. Open to remote contract, full-time, or fractional (20–30h/week) roles.

KEY ACHIEVEMENTS

- Raised payment authorization **~38% → ~85% (+47 pp)** by building two gateways solo (Stripe ~95%, Authipay ~90%), migrating traffic onto them, and moving the hosted page from iframe to full redirect; **value-weighted approval nearly doubled (31% → 59%)**.
- **Zero confirmed double-charges across 313,000+ transactions**; **99.997% merchant webhook delivery** across 238,000+ callbacks.
- Core engineer since inception on **PayBrix — publicly reporting €150M+ collected**; 13 payment gateways integrated behind PCI-scope-reducing hosted payment pages.
- **Largest contributor (of 15)** to the Port of Dakar's truck-access platform: **3.7M truck movements, 4.3M ANPR barrier authorizations across 13 gate lanes, 24/7 for 6 years** — slot booking held the busiest hour to **5.8%** of daily volume.
- Built a **greenfield multi-tenant SaaS** (Spring Boot 3.5 / Angular 20 / MQTT) live in two national markets — **+188% volume, +228% transactions, ~7× site footprint** in year one.
- Built CI/CD from scratch: **26 pipelines, 19 services, ~1-minute deploys** (median 45 s, 96.7% prod success); introduced the team's entire toolchain.
- Solo **Java 11→17 + Spring 4.3→5.8 platform upgrade in ~1 week**; #2 contributor on AngularJS → Angular 17 replatform.
- **2,300+ PRs reviewed (900+ approved)**, 500+ merged PRs authored, 2,100+ commits over 5 years as hands-on tech lead of a distributed team of 4–6.

TECHNICAL SKILLS

Backend: Java (11 / 17; legacy 8), Spring Boot (3.2–3.5), Spring Framework / MVC (5.3–5.8), Spring Security, Spring Data JPA / JDBC, Spring Batch, Hibernate, Flyway, Spring Integration (MQTT), Quartz, Lombok, MapStruct

Frontend: Angular (17–20), TypeScript, RxJS, AngularJS, JavaScript, HTML5, CSS3, Bootstrap

Payments & Security: 13 card-gateway integrations (Stripe, PayPal, Worldpay, Realex / Global Payments, ACI, Authipay / Fiserv, PayVector, Windcave, Planet, Checkout.com, NMI, Capita Pay360, Credorax) · mobile-money integration via aggregator (Orange Money, Free Money, Wari, E-Money — callbacks with hash verification) · gateway-hosted payment pages (PCI scope reduction) · idempotency & duplicate-payment prevention · signed, replay-protected webhooks · 3-D Secure · prepaid accounts, overdraft limits & invoicing · OAuth2 / JWT / OIDC · Azure AD / Entra ID

APIs & Data: REST, OpenAPI / Swagger, SOAP, JSON, XML · MySQL, SQL Server, Oracle, DB2

DevOps & Quality: AWS (Certified Developer – Associate, 2026; S3 / CloudFront / Route 53), Docker, Jenkins (CI/CD), Maven, Git / Bitbucket, SonarQube, Wazuh, Uptime Kuma · JUnit 5, Mockito, AssertJ, Testcontainers, ArchUnit, MockMvc, JMeter

Portfolio / currently learning: Kafka, RabbitMQ, Kubernetes, Spring AI — public projects at github.com/rafaelinfante (not production employer experience)

Architecture: Microservices & modular monoliths, event-driven patterns, multi-tenant SaaS, physical-access integration (ANPR cameras, barrier control), legacy modernization, system design, AI-assisted engineering, Agile / Scrum

PROFESSIONAL EXPERIENCE

Senior Full-Stack Java Engineer — Telclic (telclic.net) · Dublin, Ireland — Remote from Brazil · Mar 2016 – Present

Core engineer across payment, insurance, mobility, smart-city and port-infrastructure platforms for clients including Vodafone, Three, O2, Ireland's National Transport Authority and the Port Autonome de Dakar. Joined a 3-person team and helped grow it into a mature, multi-country engineering operation.

Payments engineering

- Raised payment authorization from **~38% to ~85%** (+47 pp): designed and built two gateway integrations solo — **Authipay / Fiserv (~90% approval)** and **Stripe (~95%)** — migrated merchant traffic onto them, moved the hosted payment page from an iframe to a full-page redirect (fewer 3-D Secure challenges, less abandonment), and eliminated checkout session abandonment on the legacy flow. Legacy gateways improved in parallel (Realex 37%→62%, Worldpay 28%→75%); **value-weighted approval rose from 31% to 59%** of attempted payment value.
- **Zero confirmed double-charges across 313,000+ card transactions** — ran a cross-gateway duplicate audit and shipped a generic idempotency / dedup layer.
- **99.997% merchant webhook delivery** across 238,000+ callbacks (8 permanent failures, zero backlog) via a retrying callback engine and monitor I built.
- Core engineer since inception on **PayBrix** (paybrix.com), an insurance-collections platform **publicly reporting €150M+ collected** — recurring payments, automated dunning, omnichannel outreach (**1M+ automated reminders**: 536k SMS + 475k email), **180,000+ policyholder records**, automated PAS reconciliation, in a PCI / ISO / GDPR-compliant environment.
- Integrated **13 payment gateways** behind unified APIs, using **gateway-hosted payment pages so cardholder data never touches our systems** (reduced PCI scope); signed, replay-protected webhooks with constant-time MAC comparison.

Greenfield product & mobility platforms

- Designed and built a **greenfield, white-label Parking Management Solution** from a blank repo (**Java 17, Spring Boot 3.5, Angular 20**, Spring Data JDBC, Flyway, Maven multi-module): **multi-tenant by design** — one codebase deployed per market with its own branding, currency, payment gateway and database — live in Ireland and the US.
- Grew it to a **~7× site footprint in its first year** of live payments (**+188% payment volume, +228% transactions**), shipping the product depth that drove it: tiered tariffs, discount QR codes, automated email/SMS reminders, a tax/fee engine, GDPR data-obfuscation on a timer, and ANPR-enforcement whitelist integration — card data delegated to our payment platform, never touched by the app. **MQTT device-telemetry backbone** (Spring Integration, QoS 2, TLS) built ahead of the hardware rollout.

Port infrastructure — TrafficFlow (Port of Dakar, 2021–2025)

- **Largest contributor (38% of commits, 15-person team)** to **TrafficFlow** (telclic.net/trafficflow), the truck-appointment and gate-access platform for the **Port of Dakar** (Java 11, Spring 5.3, Spring Batch, MySQL) — **6 years in production, 3.7M truck movements, ~700,000 port entries/year, 24/7**. Built the terminal-operator gate-pass REST API, trip lifecycle, receipt/PDF generation, and multilingual (EN/FR/Wolof/Bambara) SMS/e-mail pipelines (2M+ messages); owned the **ANPR integration controlling 13 physical gate lanes** across 3 port zones (**4.3M automated barrier authorizations**).
- Owned its payments and financial stack: prepaid haulier accounts with overdraft control and payment terms, **mobile-money integration** via aggregator callbacks with hash verification (60k+ transactions), and automated invoices, receipts and statements across 3.4M fee-charged trips — millions of euros in access fees. Slot-based booking with per-terminal hourly quotas spread arrivals across a true 24/7 profile (**busiest hour just 5.8% of daily volume**, 2.6:1 peak-to-trough) as the platform scaled through **+15.7% growth** in truck movements with a **20.7M-event audit trail**.
- Also delivered full-stack features for **TFI Bikes**, Ireland's national public bike-share across four cities (National Transport Authority).

Platform engineering, DevOps & observability

- Built CI/CD from scratch: **26 Jenkins pipelines across 19 deployed services/apps** — manual 15-min-to-1-hour releases → **~1-minute deploys** (median 45 s, 96.7% prod build success, 460 production deploys). Introduced Jira, Bitbucket, Jenkins, Slack, and Flyway; added **SonarQube** quality gates, **Wazuh** security monitoring, and **Uptime Kuma**.

Modernization & migrations

- Upgraded the core payments platform **solo in ~1 week: Java 11→17 and Spring 4.3→5.8** (~20 libraries incl. Spring Security 4.2→5.8, Hibernate 5.2→5.6), then a full package restructure and HibernateTemplate → Spring Data JPA migration.
- **#2 contributor** replatforming a legacy AngularJS 1.6.5 UI onto **Angular 17** — payment-result flow, combined-payment links, Apple / Google Pay fix, and the production cutover.

Leadership & AI-assisted engineering

- Led a distributed team of 4–6 as tech lead: **2,300+ pull requests reviewed (900+ approved, ~12 h median turnaround)**, 500+ merged PRs authored, 2,100+ commits; mentoring and client-facing technical contact — now targeting hands-on individual-contributor roles.
- Shipped AI-assisted operational tooling: autonomous daily health-check reporting for two production payment systems (shell collectors + headless LLM interpretation, scheduled).

Selected projects: PayBrix (insurance collections; clients incl. CFM Group, Campion Insurance) · Visitor Parking Management (greenfield multi-tenant SaaS, Ireland + US) · TrafficFlow (Port of Dakar truck-appointment & gate-access platform: 3.7M truck movements, ANPR, mobile money) · TFI Bikes (Ireland's national bike-share across four cities) · 2Bill (direct-carrier billing via Vodafone / Three / O2 — maintenance).

Java Developer Analyst — SulAmérica Insurances — São Paulo, Brazil · Mar 2014 – Aug 2015

- Built a batch billing system generating broker-turnover files for one of Brazil's largest insurers; developed internal web systems with Java, Spring, Struts, JSF, AngularJS, and JPA (Oracle, DB2); Jenkins deployments.

System Analyst — Everis — São Paulo, Brazil · Sep 2012 – Oct 2013

- Wrote requirements and technical specifications for a new **credit-card authorization system**; provided development support, testing, and delivery estimates; ran daily stand-ups.

Java & Web Developer — Fujitsu — São Paulo, Brazil · Mar 2011 – Jul 2012

- Developed and enhanced corporate web applications (Java, Struts, JSF, EJB, JPA / Hibernate, Servlets); unit and performance testing with JUnit and JMeter; Oracle databases.

Java Developer & Team Leader — Trevi Mechanical Industry — São Paulo, Brazil · Dec 2009 – Feb 2011

- Led a team of 3 developers building the company's control system — requirements, technical specs, schedules, and hands-on development (Java, JSF, Struts, Servlets, JPA).

Java & Web Developer — Martin-Brower — São Paulo, Brazil · Jun 2006 – Nov 2009

- Built internationalized (i18n) Java systems rolled out across multiple countries for the McDonald's supply-chain distributor; migrated legacy client-server systems to the web via SOAP; reporting with Jasper and Crystal Reports; MS SQL Server.

Java & Web Developer — Stefanini IT Solutions — São Paulo, Brazil · Mar 2004 – Oct 2005

- Built an intranet news portal and maintained the company's sales system (Java, JSP, Servlets, JDBC, XML).

EDUCATION

B.Sc. in Computer Science — Universidade Paulista, São Paulo, Brazil
General English Course — Griffith College, Dublin, Ireland

CERTIFICATIONS & COURSES

- AWS Certified Developer – Associate — Amazon Web Services (2026)
- Oracle Certified Professional, Java SE Programmer — Oracle
- Web Developer Academy & Java Academy — Globalcode
- Spring & Hibernate (incl. Spring Boot) · Angular — The Complete Guide · Apache Maven: Beginner to Guru · Responsive Web Design with HTML5 & CSS3 · Bootstrap 4 — Udemy

LANGUAGES

Portuguese — Native · English — **Fluent (C1)** · Spanish — Basic (A2)
